Core Functionality Completion Report

Fall 2019

1. Introduction

My Finance Pal is an application that will free users from the stress of keeping up with their money. Users will be able to create a budget for themselves, and the app will help them stick to it. With each paycheck, My Finance Pal will be able to separate the money into categories so they can easily keep track of their finances over a period of time. This will allow the users to have excess amounts of money between paychecks.

My Finance Pal is a beneficial project because it simplifies the budgeting process, and makes it easier to stick with your goals. This could help large amounts of people, from children wanting to save up for a video game, to a property owner keeping track of revenue and spending. This document discusses the requirements needed for the application to succeed and the level of completion of each item.

2. Requirements Status

Functional requirements status table:

ID	Description	Status	Justification or comments
